

Monarch Mobility

Re-programming the new Smarti fob

- First put the battery into the scooter and turn the power on with the key.
(IT WILL NOT WORK WITHOUT THE POWER ON)

- Lay the scooter on its side and locate the black box.

- On the black box Solax will be written in white letters and on top of this box there will be a rubber button.
- Push the button once until it beeps and repeatedly press the "A" button on the fob.

- Then press “B” and return scooter to upright position.

Please Note: You can now manually override the actuator by pulling the red bar to open and close it manually.
