

S50 carbon

LIFTING IS BELIEVING - 13KG

WHERE YOU WANT TO BE.

Folding mobility scooters seem great... until you're using one every day.

That's when it hits: lifting feels like a workout, the drive feels a bit unsettled, and comfort is... optional. **That's why we've built the S50 Carbon for the real world, not a weight target.**

It starts with a brilliantly simple **one-piece folding** design. Crafted from carbon fibre, the boldly elegant S50 Carbon drops to **just 13 kg** with the flight-ready battery removed, so lifting and loading it into the car feels genuinely manageable.

Out and about is where it really shines, though (and yes, the LED lights help). With up to **19 km range**, it's ready for long days that roll into the evening. A roomier foot platform lets you sit more naturally too (especially if you're tall). Plus, it's built with decades of trusted **STERLING** know-how, with reliability you can feel.

DESIGN

100%

Carbon Fibre Frame

How do foldable mobility scooters keep their weight down? They make the frame and key parts as light as possible. Leaving you with a mobility scooter that feels less sturdy, less comfortable, and more like a “travel-only” option than something you’d want to use every day.

The S50 Carbon is different. It’s built on a **100% carbon fibre** frame. Carbon’s high strength-to-weight ratio keeps it genuinely light without feeling delicate. Weighing **just 13 kg**, it’s easier to lift and transport, but feels robust, stable, and premium every time you ride. Backed by years of carbon know-how, it’s tested to handle everyday life - and then some.

120 kg Maximum User Weight

Carbon fibre doesn't just look the part - it brings serious strength for its weight. That's why the S50 Carbon stays light to handle, yet supports up to **120 kg**.

TRANSPORT

No dismantling, Just 2 folds!

Getting the S50 Carbon ready for the car is refreshingly simple. Pull the easy-release catch under the seat and fold it flat. Then lower the tiller and guide the handlebars into the receivers, so it locks neatly in the folded position. Even the cushion stays in place, so there's nothing extra to carry!

Just 13 kg!

Made for one-person lifting

Loading the S50 Carbon feels surprisingly manageable. Once folded, the built-in grab points on either side of the seat frame give you a balanced, confident hold - ideal when you're lifting on your own. Want it lighter? Remove the battery first (**1.9 kg**) to bring the lift weight down to **just 13 kg**.

Wheel it like luggage!

Need to move your S50 Carbon a little further? Just lift using the built-in carry handle at the front and let it roll along on the rear anti-tip wheels — just like pulling a suitcase. It's a familiar, one-person way to move your mobility scooter with less effort, ideal if you'd rather roll it than fully lift it.

Need a little extra room in the car?

The armrests can be quickly removed to reduce the S50 Carbon's width to a slim, trim **435 mm** for easier storage and transport.

435 mm

PERFORMANCE

Made to move you, too.

Yes, it's brilliantly lightweight and boot-friendly, but the S50 Carbon is also engineered for the **daily drive**. Smooth and confidence-inspiring, it feels firmer and more responsive than you'd expect from something this portable. And because it's **tested beyond expected use**, you can trust it to be just as dependable tomorrow as it is today.

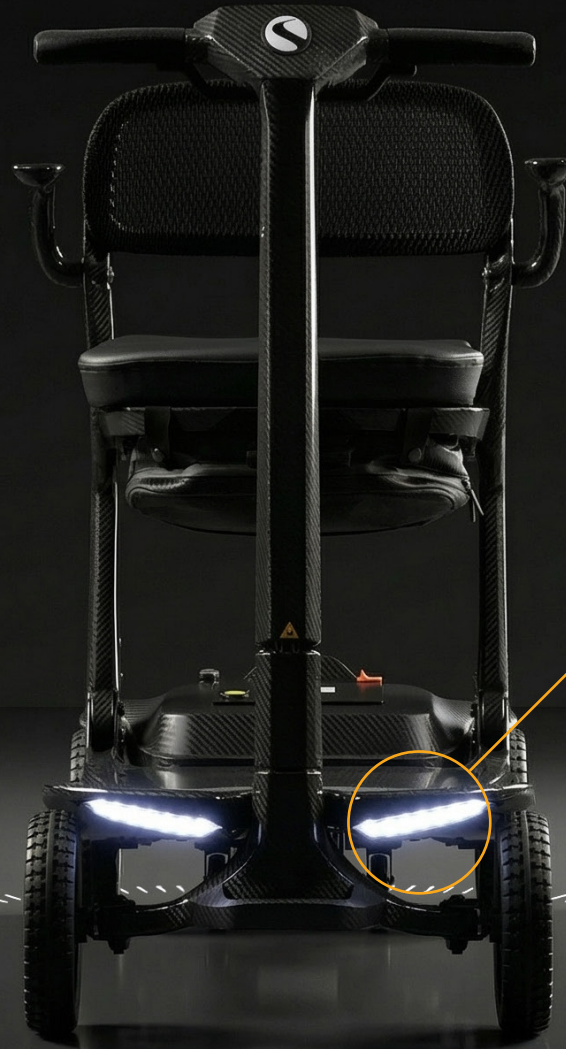

Turn Assist

Corner coming up? Turn Assist gently **adjusts your speed** as you steer, so you feel steadier and more sure-footed through turns. That's pavement-hugging control at every corner - for a smoother ride, a reduced risk of tipping, and one less thing to think about.

Made for tight spaces

Doorways at home. Supermarket aisles. Busy shopping malls. The S50 Carbon with its slim **530 mm width**, compact **1030 mm length**, and a tight **1475 mm turning radius** ensures slipping through gaps and turning in tight spot feels easy, indoors and out.

Most foldable scooters don't offer lights this strong (but we think you deserve better).

The S50 Carbon's integrated front and rear LEDs shine brighter and further than standard bulbs, so you can see what's ahead more clearly - and others can spot you sooner. The rear light is smart too. It reacts when you brake, speed up, or slow down - giving people behind you a clearer signal of what you're doing.

RELIABILITY

You know that pause... right at the worst time?

That's where decades of motor know-how make the difference. The S50 Carbon delivers a smooth, dependable ride for real-life routes - handling drop kerbs up to **40 mm**, gradients up to **6°**, and a max speed of **6 km/h**. Highly optimised, our motors help you squeeze more from every battery charge too.

Removable, 12 Ah Lithium-Ion battery

Not that you need any more reasons to stay out a little longer... but the S50 Carbon's removable battery delivers up to **19 km of range**. It weighs **just 1.9 kg**, and pops out easily for transport or for charging separately away from the scooter.

Starting your S50 Carbon is genuinely easy.

Just hold the key fob next to the control box and press the start button - no fiddly keys. And if you ever leave it parked for a moment, you've got extra peace of mind, because only your fob can activate the scooter.

Drive it like second nature.

The S50 Carbon is designed to feel natural from the first ride. A simple wig-wag control lets you move forward and reverse with your thumb or fingers, while large, easy-press buttons keep everything clear and within easy reach — ideal if you have limited hand strength or dexterity.

COMFORT

Room to ride comfortably.

Many foldable mobility scooters can feel cramped when you're seated, with the front taking up valuable space and limiting how naturally you can position your legs (**especially if you're tall**). The S50 Carbon is built differently. Its chassis sits above the front wheels, creating a larger, flatter foot platform - giving your feet a comfortable place to rest and your legs more room.

Set your "just right" driving position.

The tiller adjusts for both height and reach, so you can set it where it feels most comfortable. With the release lever positioned mid-stem, it's always within easy reach to fine-tune **without bending**. And once it's set, the robust gas-strut design keeps it firmly in place - preventing movement and firmer steering when manoeuvring.

Looks good. Feels great.

The **3" deep** seat cushion gives you extra padding you'll notice straight away - especially on longer trips. And we've got your back too: a gently curved backrest supports a more natural sitting position, while **breathable spacer fabric** allows airflow to help reduce heat build-up, keeping you cooler on warmer days.

COLOURS

Stylishly understated or confidently bold?

Curated to complement the S50 Carbon's carbon finish, our wheel accent colours add a refined touch without shouting. Subtle warmth, confident tone, effortless style — choose your favourite mix.

ACCESSORIES

Accessories that look the part.

Add the finishing touches with lifestyle accessories designed to match your S50 Carbon. Seamlessly integrated and magnetically attached, they're quick to fit — and just as easy to remove!

Power on the go!

Need to keep your phone alive while you're out? The USB-C charging port on the control box lets you plug in and top up as you ride.

Phone Holder

Adjusts to fit your phone, tilts for the perfect view and even powers it up on the go with built-in charging.

Extendable Walking Stick

Additional Front Bag

Sealed Cup Holder

Adjustable Seat Belt

Additional Rear Bag

Cushioned
Armrest Pads

Carry Bag

AIR TRAVEL

IATA Approved for Air Travel*

Looking to travel abroad? The S50 Carbon's lithium-ion battery is **IATA approved** (International Air Transport Association) for transportation by aircraft.

* Individual airlines have differing requirements relative to transport of products with Li-ion batteries. Prior to arranging any air travel with the mobility scooter, please confirm with your airline or carrier that they accept the battery-powered vehicles under UN classification UN3171. Please refer to the instructions for use for further details.

Travel Case

Pack your S50 Carbon away for safe, stress-free travel. Inside, moulded foam surrounds the scooter for a snug fit, while internal straps hold it firmly in place. The tough moulded plastic shell helps protect against bumps and bangs on the move too.

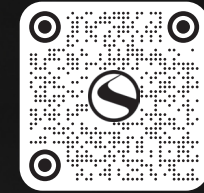

Specifications

| | |
|--|---------------------|
| Overall Dimensions (width/height/length) | 530 / 920 / 1030 mm |
| Folded Dimensions (width/height/length) | 530 / 350 / 1030 mm |
| Seat to floor height | 530 mm |
| Backrest angle | 14 Degrees |
| Back height | 320 mm |
| Maximum user weight | 120 kg |
| Total weight * | 12.88 kg |
| Weight of battery | 1.9 kg |
| Dynamic/static stability | 6 degrees |
| Range ** | 19.2 km |
| Climbing capacity for obstacles | 40 mm |
| Maximum speed | 6 km/h |
| Turning radius | 1475 mm |
| Ground clearance | 40 mm |
| Battery | 12 Ah, 24 V |

* Without battery, seat cushion, armrest, storage bag and wheel trim kit.

** Range depends on the ground surface, user weight, driving behavior, temperature and terrain.

Now that you've read all about the **Sterling S50 Carbon**, why not arrange a free demonstration and try it for yourself?
